

A Glimpse of Me... Richard Dioses

I grew up in the district of José Gálvez, Lima. Although there weren't any teams in my neighborhood, I was always passionate about football. One day, a scout noticed me and brought me to train with the Cementos Lima team. From there, I gradually advanced, and eventually, I even got the chance to compete in the Copa Perú

At 15, I was an MVP in every game, aiming to become a professional player. However, an injury changed my path and led me toward technology. Today, I am an eighth-semester Systems Engineering student at UTP, and I've discovered a new passion along this journey. I've earned certifications in SAP MM, ISO standards, and Cisco—something I couldn't have imagined at first. Transitioning from football to technology wasn't easy, but the discipline I gained in sports helped me tackle challenges and quickly advance in my career. I started as an operator and, within a short time, moved up to logistics assistant; now, I'm just a step away from becoming a systems analyst. Stepping out of my comfort zone and facing the real working world has been a valuable experience.

My inspirations are my mother and my mentors at Logisa. They've encouraged me to start my own projects and to not be afraid of trying new things. Currently, I'm developing an efficient warehouse management system to streamline inventory control—a project that reflects my commitment to innovation and leadership.

When I'm not working or studying, I enjoy playing football and watching movies with my girlfriend, who has been a constant support along the way. The time we spend together recharges me and reminds me why all the hard work is worth it.

Every challenge I've faced has pushed me to give my best and to find purpose in each step I take. To me, success isn't about a single dream fulfilled; it's about the sum of all the efforts and the courage to adapt and pursue new goals.
