

## 1. It all starts in the lab

Medicines are born here. Each formula is the result of years of research and dedication by scientists with a single purpose: to improve people's lives. This is the first step in a journey filled with commitment and responsibility.

## 2. First safeguard: Warehouses of origin

After manufacturing, medications are carefully stored in facilities that guarantee ideal conditions to preserve their quality. Because every bottle, every box, can make a difference in someone's life.

## 3. Transportation that takes care of what is most valuable

Medicines aren't just products: they're hope, relief, continuity of life. That's why they're transported under strict controls, in vehicles that carefully monitor every detail of temperature and safety, as if they were carrying a treasure... because they are.

# FROM THE LABORATORY TO THE PATIENT'S HEART: THE JOURNEY THAT SAVES LIVES

## 4. Logistics center: the heart of the operation

Here, the silent but vital work of many hands is concentrated:

- We rigorously inspect each batch.
- We store under strict sanitary standards.
- We prepare orders with precision and care.
- Every employee is part of the purpose of saving lives.

## 5. The medicine on its way to its destination

From our warehouses, medications are shipped to hospitals, clinics, and pharmacies. Each delivery is monitored to ensure they arrive on time, in perfect condition, and in the right hands.

## 6. The final destination: the patient

Finally, the medicine reaches the person who needs it most. A mother, a child, an elderly person, And all the effort becomes meaningful. Because behind every box delivered, there is a life that can be healed.

**“Because our logistics doesn't move products, it moves hope.”**
